About Afinitas

Afinitas is the world's leading provider of equipment, automation, forming systems and accessories used in pipe and precast concrete product manufacturing.

We offer everything you need to optimize your production — from the world's leading machinery, to high-quality wetcast forming systems for infrastructural, transportation and utility needs to a wide range of concrete accessories for spacing, lifting, fixation, reinforcement and more.

Headquartered in St. Louis, MO, we have nearly 500 team members worldwide, with sales and service facilities in the USA, Denmark, Germany, Italy, UK, and India. Our team of experts understands your needs and provides unmatched service and support. We offer trusted products, many made in the USA, and we are continually developing new products and technologies to help you win more business.

A Portfolio Built on Trusted Brands

1949

Founding of **Hawkeye**
in Mediapolis, IA
Steel Spacers

- Industry's first weldless Box-Lok Spacer
- The only brand to offer "tangle-free" packaging
- Spacer handling cart — a brand exclusive

2008

Merger of **Hawkeye** and Danish
equipment manufacturer
Pedershaab.

2016

BW Forsyth Partners,
a **Barry-Wehmiller** company,
acquires **HawkeyePedershaab.**

Service, Selection, Solutions

Afinitas is known for its top-quality pipe and precast concrete accessory products and unmatched service. When you team up with Afinitas you get product, sourcing, manufacturing and service specialists who know accessories and know how they are used. Look to Afinitas for assistance with your next project, we specialize in:

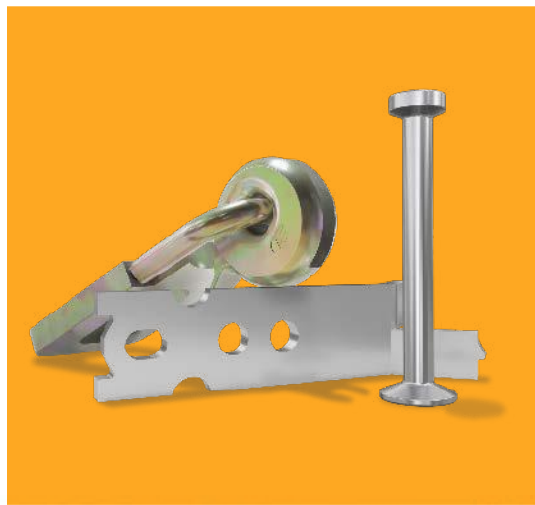

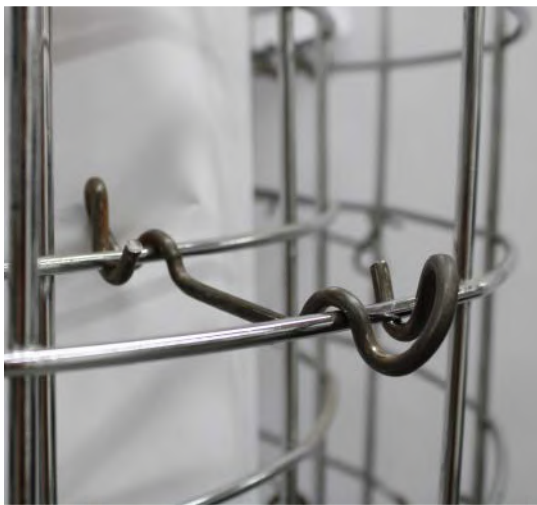

Cable Racks and Arms
Chamfer

LIFTING

Lifting device products are instrumental for safe and efficient handling of precast concrete elements throughout the manufacturing process, regardless of wetcast or drycast methods.

If you don't see the product you need, we can likely custom-make it. Just provide your design and we'll manufacture to your specifications using domestic materials.

Ask about our Made in the USA capabilities. We can custom-manufacture to your specifications using domestic materials.

See our entire offering of lifting accessories.

Made in USA Lifting Devices

When it comes to precast concrete lifting devices, quality and reliability are non-negotiable. Our lifting solutions, proudly manufactured in Sleepy Eye, MN, stand apart for their superior craftsmanship, rigorous safety standards, and long-lasting performance. Designed with precision and built to withstand the toughest conditions, these devices embody the innovation and excellence associated with American manufacturing. Choosing locally made products not only supports domestic industry but also ensures faster lead times, exceptional customer support, and compliance with stringent US regulations.

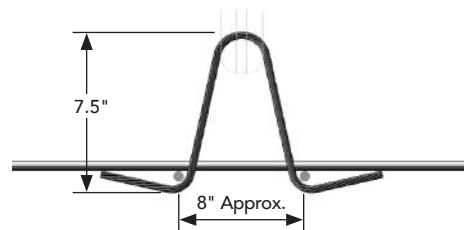

We can manufacture US steel flat iron lifting devices to meet Made in the USA requirements at our factory in Sleepy Eye, MN. Call us at 507-794-5821 for a quote today!

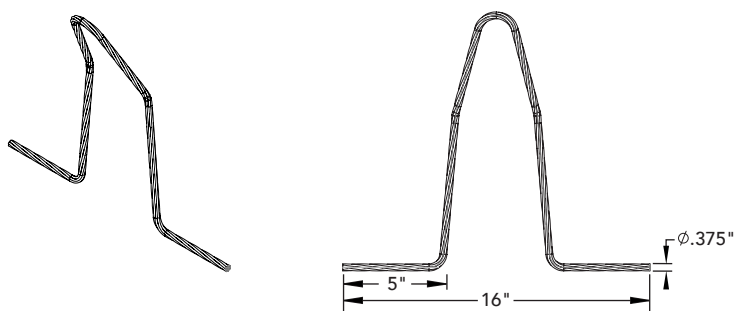

Lift Cables

- 3/8" EHS Galvanized
- 3/8" 1 x 7 Extra High Strength A475 Galvanized.
- Certified to have minimum break strength of 15,400 lbs. Mill Certs included.
- To maintain 4:1 safety factor DO NOT LIFT OVER 3,850 lbs. per cable.
- Safe working load is based on 4:1 safety factor on the minimum breaking strength of steel.
- Factors to consider are depth of anchor, placement under rebar mats, concrete compressive strength and adequate curing.

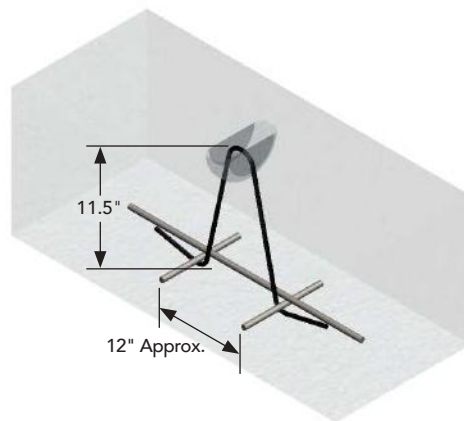

Part Number	Description	Qty / Box	Weight (lbs)
3825	3/8" x 25" V EHS Cable - Galvanized	2,000	1,180
3836	3/8" x 36" V EHS Cable - Galvanized	2,000	1,740
3838	3/8" x 38" V EHS Cable (STP CB Lifter) - Galvanized	2,000	1,760

3/8" x 25" Lift Cable — Part #3825
Place cable under wire mats or rebar.

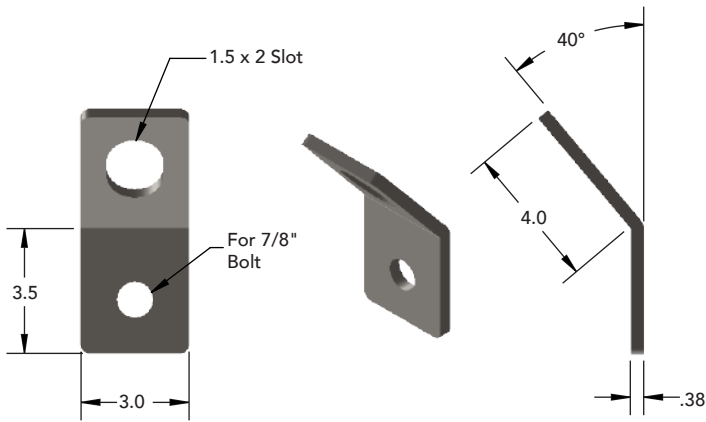

3/8" x 38" Lift Cable — Part #3838

3/8" x 36" Lift Cable — Part #3836
Place cable under wire mats or rebar.

Lift Plates

Note: Please consider the breaking strength of the bolt and concrete when using this plate. During testing the bolt broke before the plate. Lift Plates can be made to your specifications.

Part Number	Size	SWL (lbs)	Qty.
3803	3/8" x 7 1/2"	5,000	100+

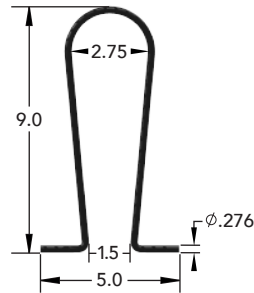

10% charge for less than qty. listed.

Lift Hole Supports

Wire is .276" negative deformed wire. Lift hole support bar to be used with 1.25" lift pockets.

Part Number	Size	Qty.
LHSD6915	D6 x 9" x 1.5"	3,000+

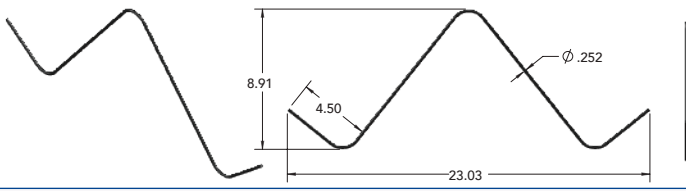

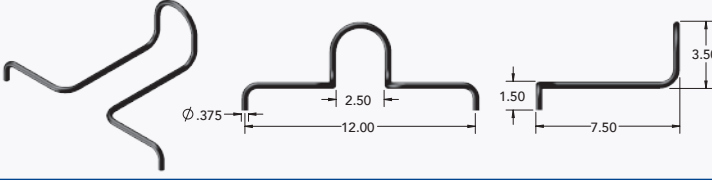

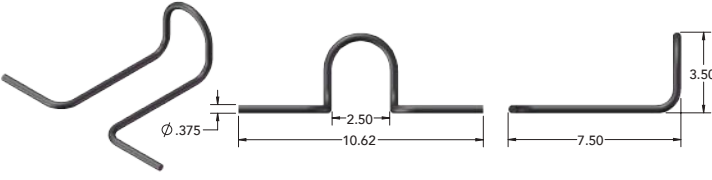

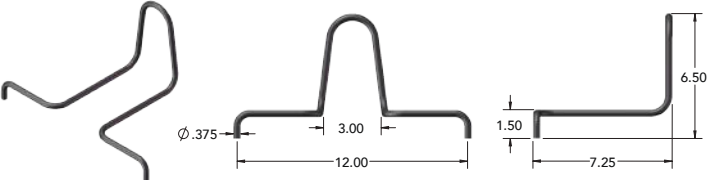

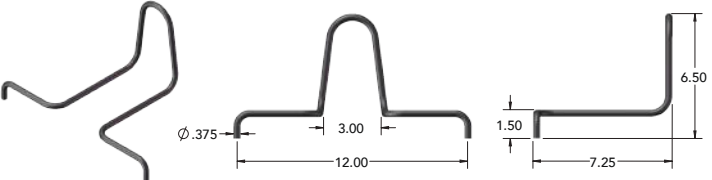

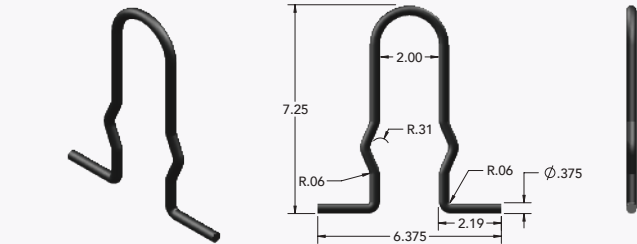

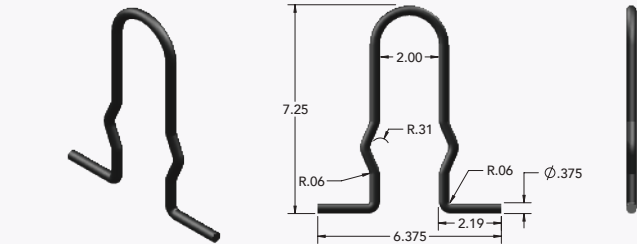

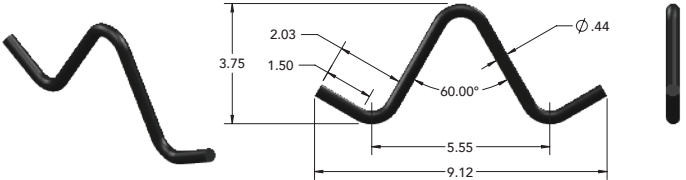

10% charge for less than qty. listed.

Lift Bars

Safe working load is based on 4:1 safety factor on the minimum breaking strength of steel. Factors to consider are depth of anchor, placement under rebar mats, concrete compressive strength and adequate curing.

Custom Lift Bars Available — Please Send Requirements.

REINFORCEMENT

Engineered to enhance the strength and durability of your precast concrete projects, our reinforcement products are proudly made in the USA to meet the highest quality standards. From precision-crafted rebar mats and stirrup mats to wire cone cages, our offerings provide reliable support for a wide range of applications. Designed for efficiency and ease of installation, these reinforcement solutions deliver superior performance, ensuring long-lasting results for every project. Whether you're building infrastructure, commercial developments, or residential structures, our products are built to exceed expectations and stand the test of time.

See our entire offering of reinforcement products.

Cover Mats

Cover Mats are a complete line of rebar and deformed bar reinforcement mats. Cover mats can be made for round or square applications and are available with eccentric or centered manhole openings. We have the capability to custom design and manufacture rebar reinforcement products to meet your specific requirements.

- Can be custom-made
- Typical material is A706 grade 60 rebar

Base Mats

Base Mats are a complete line of rebar and deformed bar reinforcement mats. Base mats can be made for round or square applications and do not have a manhole opening. We have the capability to custom design and manufacture rebar reinforcement products to meet your specific requirements.

- Can be custom-made
- Typical material is A706 grade 60 rebar

Intake Cover Mats

Our Intake Cover Mats are rebar and deformed bar reinforcement mats. Intake mats can be made for round or square applications and are available with eccentric or centered manhole openings. We have the capability to custom design and manufacture rebar reinforcement products to meet your specific requirements.

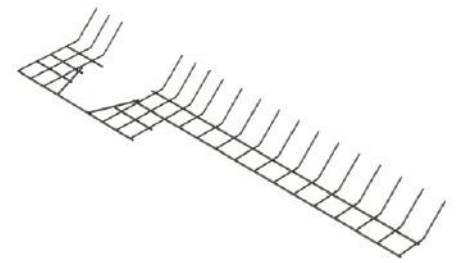

- Can be custom-made
- Available as base mat or cover mat
- Typical material is A706 grade 60 rebar

Eccentric Wire Cone Cages

Manhole Riser Cone Cages are prefabricated wire cages for concrete offset or centered riser/reducer sections. Cages are sold as formed, welded and ready to place in your concrete form.

We have the capability to custom design and manufacture wire cages and reinforcement products to meet your specific requirements.

Flared End Round Pipe Wire Cages

Round pipe wire flared end cages are prefabricated wire cages for concrete flared end sections. Cages are sold as formed, welded and ready to place in your concrete form.

We have the capability to custom design and manufacture wire cages and reinforcement products to meet your specific requirements.

Shear Steel Stirrup Mats

Shear steel reinforcement mats also known as stirrup mats are made up of welded wire reinforcement used in concrete pipe and precast products for shear reinforcement. The wire reinforcement stirrups are bent in a loop and placed perpendicular to the reinforcing cages. Producers use shear steel reinforcement to increase shear capacity of the member when shear capacity provided by concrete alone is not adequate.

Afinitas offers Stirrup Mats as a top shear steel solution for concrete pipe, box culverts and three-sided precast concrete structures.

The benefits of our shear steel reinforcement mats include:

- 200% mechanical bond increase
- Easy installation pre-fabricated mats
- Versatile! Adapts to any cage configuration for concrete pipe or boxes
- Positive placement of shear members
- Great resistance to pull out

Quick Installation and Handling of Stirrup Mats

Stirrup Mats are shipped completely assembled, ready for immediate installation to the inner or outer cage. The required number of stirrup elements (lines) are held in place by flexible element tie wires allowing the panel to be formed by hand to contour of the cage. Loops and elements are spaced to permit easy installation, and may be held in place.

Shear Steel Stirrup Mat Installation

There are two methods commonly used for installing Stirrup Mats. The most common of these is to place a Stirrup Mat inside the inner cage with the loops directed toward the outer wall of the pipe. The mat is then securely attached to the inner cage with rebar tie wires.

An alternate method is to insert the loops through the outer cage toward and through the inner cage. Lock Rods are then inserted into the tips of the loops which extend through the inner cage. This method is preferred when Stirrup Mats are required for small to medium diameter pipe when it is difficult to install the mats from inside of the cage.

Box Culverts and three-sided structures often require shear reinforcement on both cages for top, bottom and side walls. System provides shear reinforcement to both cages, as well as securely tying the cages together.

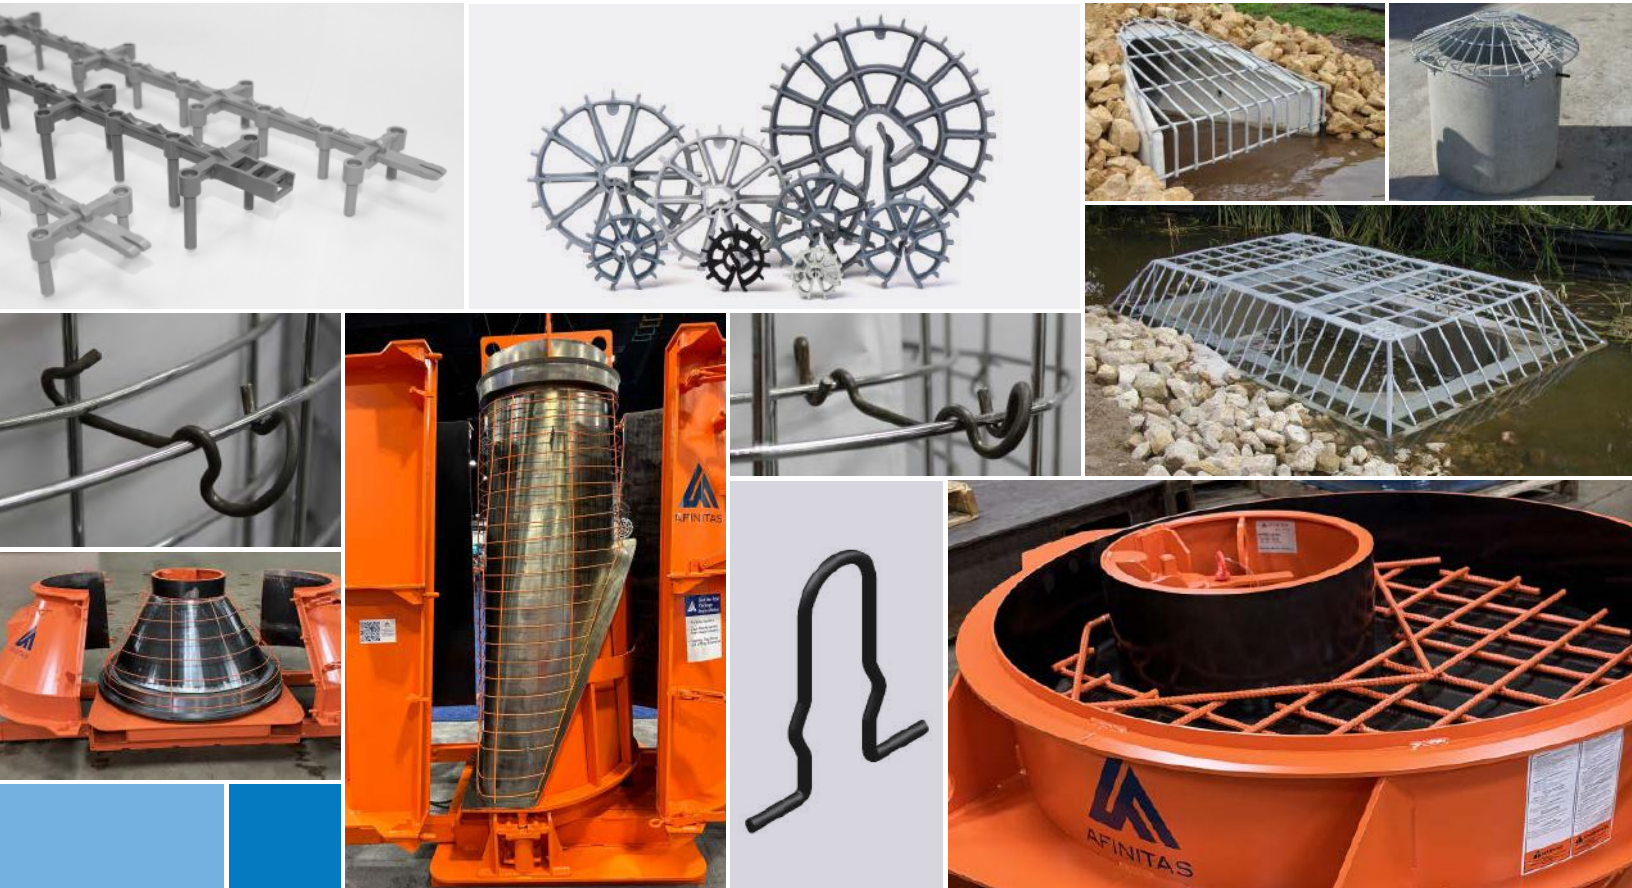

Shear Steel Design Assistance

We are happy to work with you in developing a manufacturable design for concrete pipe, box culverts and three-sided structures. Please contact us at 1-800-338-0715 for more information on this service. All designs and drawings must be reviewed and accepted or changed by qualified personnel within your company familiar with the product, design and end use prior to production. Afinitas and its associates assume no responsibility for the adequacy of these designs or the products produced using these designs or drawings.

Let Us Help with Your Made in the USA Requirements

Afinitas Offers Many USA-Made Steel and USA-Manufactured Concrete Accessories.

Facing Build America, Buy America (BABA) Act requirements? Afinitas can help. We offer a wide variety of quality, Made in the USA products, including steel and plastic spacers, wire cone cages, rebar mats, pipe ties-tie rods, grates, trash guards and more. Many are proudly manufactured at our plant in Sleepy Eye, MN.

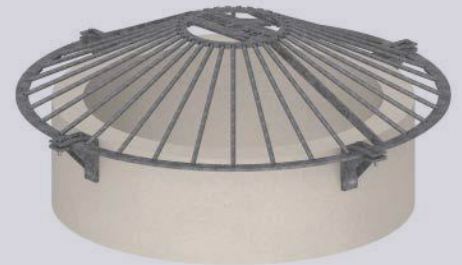

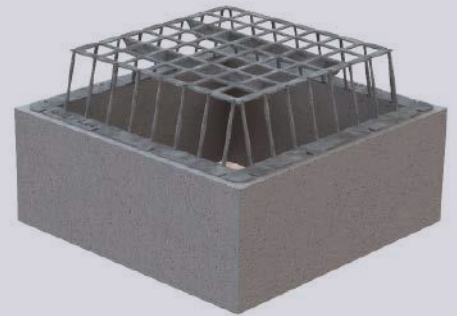

Visit www.afinitas.com/accessories
to see the selection or contact your local Afinitas sales rep.

GRATES

Made in the USA steel grates are high-quality, durable solutions specifically engineered for stormwater drainage applications. These grates are designed to provide efficient water flow management while withstanding heavy loads and harsh environmental conditions. Manufactured to meet rigorous standards, they ensure long-lasting performance and reliability.

See our entire offering of
grates.

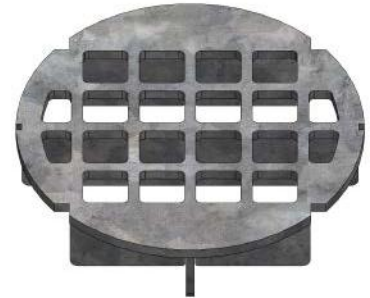

Bell End Grates

Bell End Grates are designed to set into the bell end of a vertical pipe. Grating has support bars welded on the bottom side to elevate grate and make flush with pipe.

- Made from 1/2" plate with 2" openings
- Fits inside bell end pipe
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Outlet Screens

CMP and HDPE Outlet Screens designed to mount on an inlet or outlet pipe and prevent small debris from passing through. Screens are available as inside or outside mounting. Outside mounts are sized to fit CMP. Inside mounts can be installed in any style of pipe.

- Plate design is durable and clean
- 1/4" plate thickness
- Typical openings are 2" but also available as 1" and custom sizes
- Includes 4 mounting tabs for through bolts or self-drilling screws
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Barrel Pipe Grates

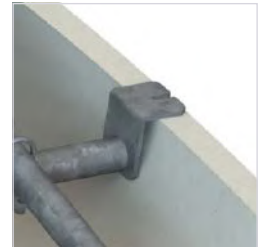

Vehicle Safety Grates are designed to fit 4:1 sloped barrel pipe sections. Also known as Barrel Pipe Grates.

- Constructed of 3" Sch 40 pipe and galvanized
- Upper cross pipe to have firm contact with apron and longitudinal pipe
- Two longitudinal pipes equally spaced required on 72" diameter apron
- Bent or cut and welded pipe

Safety Apron Grates

Safety Grates are designed to cover the sloped round pipe end section of an inlet or outlet pipe and prevent large debris from passing through while also restricting access to the pipe system. Grates are designed around MN DOT Standard Plate 3128H (for metal pipe). Grates are offered with two options for mounting: Swinging side mount tabs or a dropped end bar.

- Solid bar design for durability and long life
- Typical bar c/c is 12" – 18" one direction
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Safety Grates — Royal Style

Safety Grates are designed to cover the sloped round pipe end section of an inlet or outlet pipe and prevent large debris from passing through while also restricting access to the pipe system. Designed around MN DOT Standard Plate 3022C, design option 2 for round pipe end sections. Grates are offered with three options for mounting: Top mount tabs, swinging side mount tabs or a dropped end bar.

- Solid 1 1/2" bar design for durability and long life
- Typical bar c/c is 12" – 18" one direction
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Cone Grate Trashrack — Side Mount

Side Mount Cone Grates are designed to mount near the top of round manhole inlet or outlet structures to keep debris from entering the stormwater system. Side mount style allows for water flow under the grate if the top flow becomes restricted.

- Grates 72" and larger are made as a two-piece, bolt-together design
- Grates are easy to install but will require access to the side of the manhole for mounting brackets
- Plate and bar hybrid design is both clean and cost-effective
- 6" max. opening between vertical bars
- Made from 1/2" plate with 3/4" or 1" round bars depending on grate size
- Includes side mount brackets
- Anti-vortex plate can be added upon request
- Hinged and lockable access doors can be added upon request
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Side Mount with Brackets

Also available with Anti-Vortex Plate.

Fastener Detail

Cone Grate Trashrack — Top Mount Style

Top Mount Cone Grates are designed to mount on the top of round manhole inlet or outlet structures to keep debris from entering the stormwater system. Top mount cone grates are easy to install and allow for at grade manhole installations but can be used in a variety of applications.

- Grates 84" and larger are made as a two-piece, bolt-together design
- 6" max vertical between bars
- Plate and bar hybrid design is both clean and cost-effective
- Made from 1/2" plate with 3/4" or 1" round bars depending on grate size
- Anti-vortex plate can be added upon request
- Hinged and lockable access doors can be added upon request
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Raised Cone Grates

Raised Cone Grates are designed to mount on top of round manhole inlet or outlet structures to keep debris from entering the stormwater system. Raised grate design increases flow capacity.

- Grates 84" and larger are made as a two-piece, bolt-together design
- Plate and bar hybrid design is both clean and cost-effective
- Made from 3/8" plate with 3/4" or 1" round bars depending on grate size
- Integrated mounting flanges for securing grates
- Anti-vortex plate can be added upon request
- Top cone grate is removable for access to the manhole
- Hinged and lockable access doors can be added upon request
- Made from aluminum or stainless steel

Greta Grates

Greta Grates are designed to mount on top of round manhole inlet or outlet structures to keep debris from entering the stormwater system. Raised grate design increases flow capacity.

- Sizes 12" – 33" have a removable single top grate
- Sizes 36" – 96" have a hinged top grate
- The base structure for the 96" and larger are built in two pieces for easy installation, bolt-together design
- Plate design is both clean and cost-effective
- Made from 3/8" and 1/2" plate depending on grate size
- Integrated mounting flanges for securing grates
- Anti-vortex plate can be added upon request
- Top skimmer grate is hinged (on select sizes) and also removable for access to the manhole
- Separate lockable access doors can be added upon request
- Galvanized steel construction
- Can be made from aluminum or stainless steel

52060	1/2" x 3 3/4" Stainless Steel						

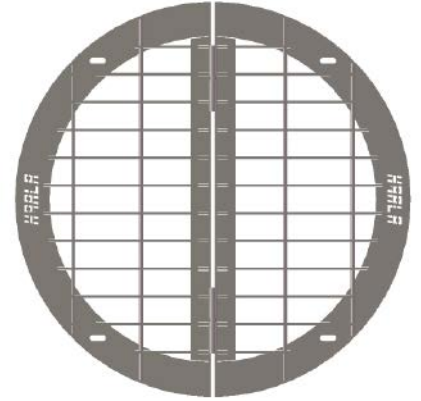

Also available with Anti-Vortex Plate.

Pond Skimmer Grates — Flat Iron Style

Pond skimmers are made from 3/8" x 2" flats at 4" C/C and have a fabricated 3 1/2" x 3/8" angle iron outer frame. Bearing bars run perpendicular to the hinge joint. All grates have cross bars. Hinges are mounted so that the grate can be disassembled in the field.

- Integrated mounting flanges for securing grates
- Anti-vortex plate can be added upon request
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Pond Skimmer Grates — Woodbury Style

Pond skimmers are made from 3/8" x 2" flats at 4" C/C and have a fabricated 2 1/2" x 3/8" angle iron outer frame. Bearing bars run parallel to the hinge joint. Grates 84" and larger have cross bars. Hinges are mounted so that the grate can be disassembled in the field.

- Integrated mounting flanges for securing grates
- Anti-vortex plate can be added upon request
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Pond Skimmer Grates for Round Manholes

Pond Skimmers are designed to mount on top of round manhole inlet or outlet structures to keep debris from entering the stormwater system. Works well where some pedestrian traffic is expected and can be secured to limit access.

- Standard skimmers 48" and smaller do not have hinges unless specified
- Made from plated unless specified rod style
- Sizes 60" and larger have supports on underside
- Grates can be made to your specifications
- Hinged and locked access doors can be added
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Side Flow Grates for Manholes

Side Flow Grates are designed to cover inlet orifices and prevent medium sized debris from passing through. All grates are made from plate for a clean and smooth contact surface. Also can be made with a flat top flange for mounting at the top edge of manholes when there's a need to cover a weir notch or cutout.

- Plate design for a clean appearance
- Standard 3" wide openings
- Perpendicular offset design for increased filter area
- Mounting flanges on 4 sides
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Part Number	Manhole OD (in)	Grate Opening (in)	Depth (in)	Plate Size (in)
SF1036958	58	10 x 36	9	1/4

SF6429114	114	6 x 42	9	1/4

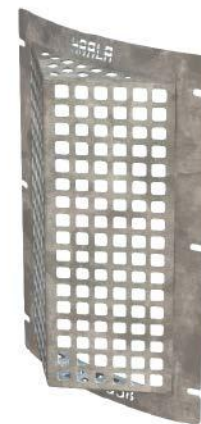

Triangle Grates for Manholes

Triangle Grates are designed to cover inlet orifices and prevent small debris from passing through. The raised and angled design helps to deflect debris and increases filter area. All grates are made from plate for a clean and smooth contact surface instead of a bi-directional bar design or expanded metal.

- Plate design for a clean appearance
- Standard 1" openings (other sizes can be made)
- Angled front plate to maximize debris deflection
- Mounting flanges on 2–4 sides depending on size
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Part Number	Manhole OD (in)	Grate Opening (in)	Depth (in)	Opening Web (in)	Plate Size (in)

TR3030558	58	30 x 30	5	1 – 1/2	3/16

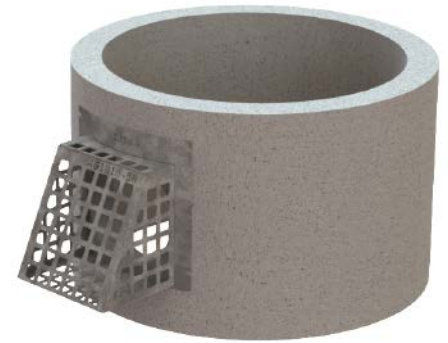

Angle Grates for Manholes

Angle Grates are designed to cover inlet orifices and prevent small to medium debris from passing through. The top angled design helps to minimize the amount of debris that settles on top after the water recedes. All grates are made from plate for a clean and smooth contact surface.

- Plate design for a clean appearance
- Standard 2" openings (other sizes can be made)
- Angled top/front plate to maximize debris deflection
- Mounting flanges on 3 sides allows grate to be mounted at floor-level inverts
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Top Grates — Box

Flat Top Box Grates are designed to mount on top of box inlet or outlet structures to keep debris from entering the stormwater system. Works well where some pedestrian traffic is expected and can be secured to limit access. Hinges are mounted to one side of the concrete structure to allow the entire grate to open and gain full access to the structure.

- Clean and durable plate-style design
- Full access side hinge
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Beaver Buster Grates

Beaver Buster Grates are designed to be mounted on boxes with offset end faces to keep medium and large debris from entering the stormwater system while also limiting access.

- 3" x 4" x 3/8" formed mounting angles on each end
- 2" x 3/8" flat bars welded at 4" c/c
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Raised Mount Grates for Box Inlets

Raised Box Grates are designed to mount on top of box inlet or outlet structures to keep debris from entering the stormwater system. Works well where some pedestrian traffic is expected and limits access. All grates are made from plate with round bar riser legs. Raised grate design increases flow capacity. Can be made to your specifications.

- Plate and bar hybrid design is both clean and cost effective
- Made from 3/8" plate and 3/4" round bars
- Integrated mounting flanges for securing grates
- Hinged and lockable access doors can be added upon request
- Standard size hatch (about 30" x 30") can be added for extra cost
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Raised Side Grates for Box Inlets

Raised Side Grates are units designed to cover inlet orifices and prevent medium to large debris from passing through. All grates are made from plate with round bar riser legs. Works well to cover larger openings or multiple small openings.

- Plate and bar hybrid design is both clean and cost-effective
- Raised grate design increases flow capacity
- 3/8" plate with 5/8" round bars
- Typical opening size is 4"
- Mounting flanges on all 4 sides
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Grate for Box Inlets

Inlet Grates are units designed to cover inlet orifices and prevent large debris from passing through. All grates are made from plate with round bar riser legs.

- Plate and bar hybrid design is both clean and cost effective
- 1/4" plate with 5/8" round bars
- Typical openings in plate are 6" and bars are at 7" c/c
- Mounting flanges on all 4 sides
- Galvanized steel construction
- Can be made from aluminum or stainless steel

Angle Grates for Box Inlets

Angle Grates are designed to cover inlet orifices and prevent small to medium debris from passing through. The top-angled design helps to minimize the amount of debris that settles on top after the water recedes. All grates are made from plate for a clean and smooth contact surface.

- Plate design for a clean appearance
- Standard 2" openings (other sizes can be made)
- Angled top/front plate to maximize debris deflection
- Mounting flanges on 3 sides allows grate to be mounted at floor-level inverts
- Galvanized steel construction
- Can be made from aluminum or stainless steel

GUARDS

Our Made in the USA steel trash guards ensure reliable protection and efficient stormwater flow. Designed for use in drainage systems and stormwater management, these durable products prevent debris buildup, minimize clogging, and safeguard your infrastructure. Whether for culverts, outfalls, or storm drains, our trash guards combine robust construction with easy installation to meet the demands of various applications.

See our entire offering of guards.

CMP Steel Pipe & Plate Style Trash Guards

Trash Guards are designed to cover the flared end section of an inlet or outlet pipe and prevent large debris from passing through while also restricting access to the pipe system. Guards for 12" – 18" are also available as a plate style. Please note form company when ordering.

- Steel flared end section is NOT included with the guard.
- Solid bar design for durability and long life
- Typical bar c/c is 6" one direction
- Hinged mounting tabs at 3 points
- Galvanized steel construction
- Can be made from aluminum or stainless steel
- Can be made to your specifications

Plate Style Trash Guard Option

Plate style guard design is more durable and allows for quick and easy one-man install. A cordless drill and vice-grip is all that is needed for pre-install or on the job site install. Grates also have size marking for easy pipe-to-grate coordination.

Part Number	Size (in)	Plate (in)	Opening (in)	Web (in)
TGCMP12-P	12	1/4	4 x 6	3/4
TGCMP15-P	15	1/4	5 x 7	3/4
TGCMP18-P	18	1/4	6 x 8	1

Bullnose Trash Guard

Trash Guards are designed to cover the flared end section of an inlet or outlet pipe and prevent large debris from passing through while also restricting access to the pipe system. The bullnose style guard increases the filtered flow capacity by extending beyond the concrete apron.

- Solid bar design for durability and long life
- Typical bar c/c is 6" one direction
- Hinged mounting tabs at 3 points
- Galvanized steel construction
- Can be made from aluminum or stainless steel

	36" – 51" Span Arch
TGBKC-GD	TG 48" – 96" Round
	59" – 102" Span Arch

Kits Include: All kits are made with domestic parts only. Kits come with bolts, washers and nuts. One kit needed per trash guard.

Ask about our Made in the USA capabilities. We can custom-manufacture to your specifications using domestic materials.

Illinois Trash Guards

Illinois Trash Guards are designed to cover the flared end section of an inlet or outlet pipe and prevent large debris from passing through while also restricting access to the pipe system. These guards are designed around IL standard 542311.

- Flat Iron
- Includes top hardware kit and bottom cross pipe
- Galvanized steel construction
- Naperville Guards are designed with 8" x 3" openings. Originally built for the city of Naperville, IL.
- Can be made from aluminum or stainless steel

PIPE TIES/TIE RODS

Designed with durability and precision, these essential components are crafted to meet the highest standards for connecting precast concrete pipes and inlets in construction projects. Our selection ensures secure and efficient assembly, supporting structural integrity for a variety of applications. Proudly manufactured in our Sleepy Eye, MN, factory, these products reflect quality craftsmanship and reliability you can trust on every job site.

See our entire offering of pipe ties and tie rods.

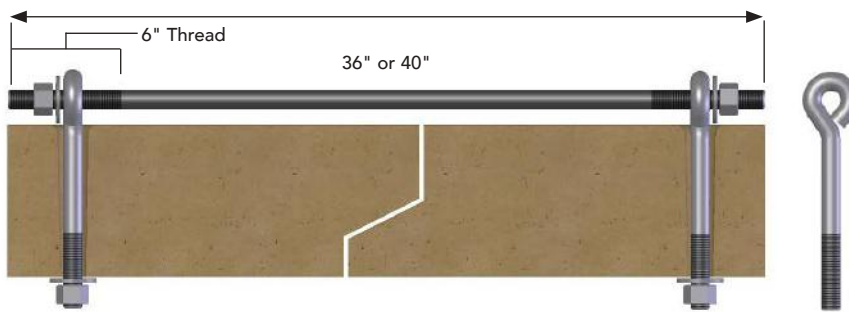

Double Eye Pipe Ties — Iowa

These Iowa DOT-approved pipe ties are assemblies with (2) formed eye bolts and a straight top rod that tie concrete pipe and box joints together.

- Extra thread for increased adjustment
- All parts are hot dip galvanized to ASTM F2329
- Includes (4) hex nuts ASTM A563 and USS washers
- Pipe ties are designed for holding pipe or box sections together, not for pulling sections tight
- All material is melted and manufactured in the USA. Certifications available upon request.
- Also known as tie rods and joint restraints
- Extra long pipe ties to use with Energy Dissipators are available. Call for quote.

Single Eye Pipe Ties — Minnesota

These Minnesota DOT-approved pipe ties are assemblies with a formed eye bolt and a formed L rod that tie concrete pipe and box joints together.

- Extra thread for increased adjustment
- All parts are hot dip galvanized to ASTM F2329
- Includes (3) hex nuts ASTM A563 and (3) USS washers
- Pipe ties are designed for holding pipe or box sections together, not for pulling sections tight
- All material is melted and manufactured in the USA. Certifications available upon request.
- Also known as tie rods and joint restraints

Concrete Pipe Ties

Specification Reference: 2501, 2503

Standard Plate No. 3145G

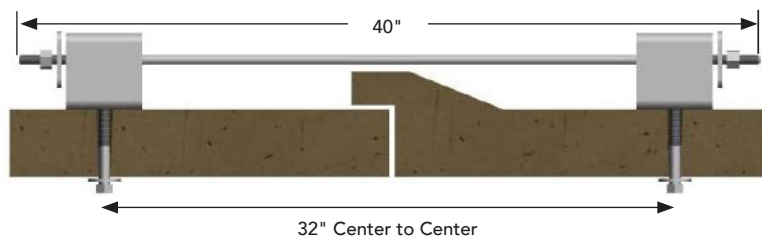

Bell End Spacer

Washington County Pipe Ties

Standoff style pipe tie is a system for tying together concrete pipe where a smooth inside surface is desired. Designed specifically to compensate for bell end pipe.

- Galvanized steel
- Rod and tubes are hot dip galvanized in accordance with the requirements of ASTM F2329
- Each pipe tie assembly includes the following fasteners: (2) Hex Nuts, (2) Plate Washers, (2) Tap Bolts and (2) USS Washers hot dip galvanized in accordance with the requirements of ASTM F2329, except tap bolt is zinc plated.
- The material is of domestic origin and is melted and manufactured in the USA. Certifications are available upon request.
- Also known as tie rods and joint restraints.

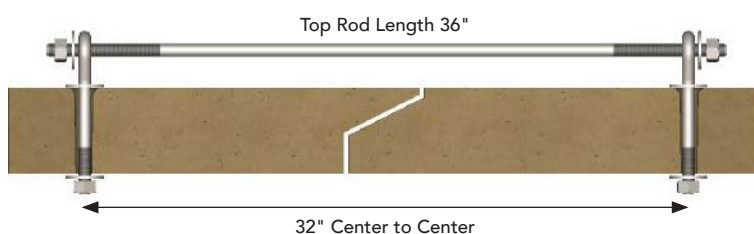

Part Number	Size (in)	Pipe ID (in)	Qty/Box

Hideaway Tie Rods

Hideaway tie rods are used for tying concrete pipe or boxes together where a smooth inside surface is desired, or where disturbing the interior surface of the concrete is not allowed.

- Heavy duty welded coupler design.
- All parts are hot dip galvanized to ASTM F2329.
- Each assembly includes (2) ASTM A563 heavy hex nuts, (2) couplers, and (1) connecting rod.
- Couplers are available as straight or angled to help prevent pull-out.
- All material is melted and manufactured in the USA. Certifications available upon request.
- Also known as pipe ties and joint restraints.

Part Number	Size (in)	Qty/Box
Option A – 75°		
3150G	1 x 5	150
3144GW	3/4 x 3	150
3145GW	3/4 x 4	150
Option B – 90°		
3151G	1 x 6	150

Note: 3/4" versions include (2) F436 washers.

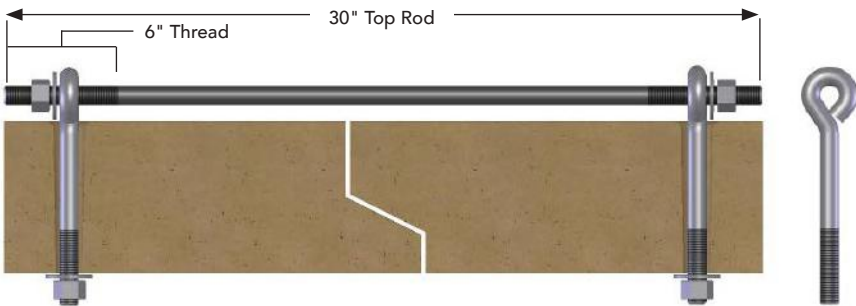

Wisconsin Pipe Ties

Wisconsin Style pipe ties are assemblies with (2) formed eye bolts and a straight top rod that tie concrete pipe and box joints together.

- Extra thread for increased adjustment
- All parts are hot dip galvanized to ASTM F2329
- Includes hex nuts and washers for each set of threads
- Pipe ties are designed for holding pipe or box sections together, not for pulling sections tight
- Also known as tie rods and joint restraints

Part Number	Size (in)	Qty/Box
WI3460G	3/4 x 6	240
WI3470G	3/4 x 7	240
WI3490G	3/4 x 9	240
WI10105G	1 x 10 1/2	120
WI10125G	1 x 12 1/2	120

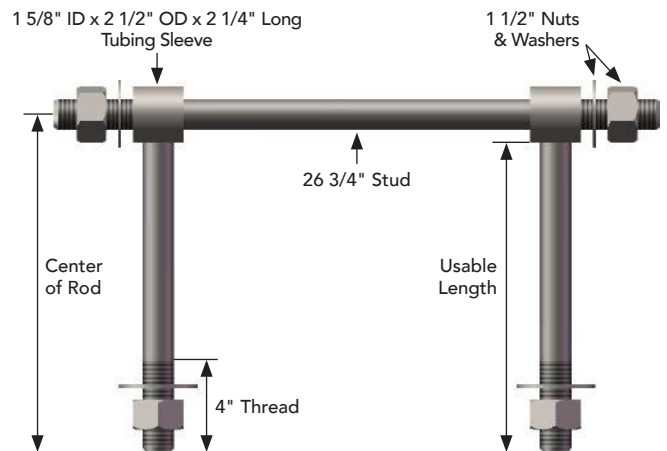

Heavy Duty Couplers

Heavy Duty Couplers for large boxes or bridges.

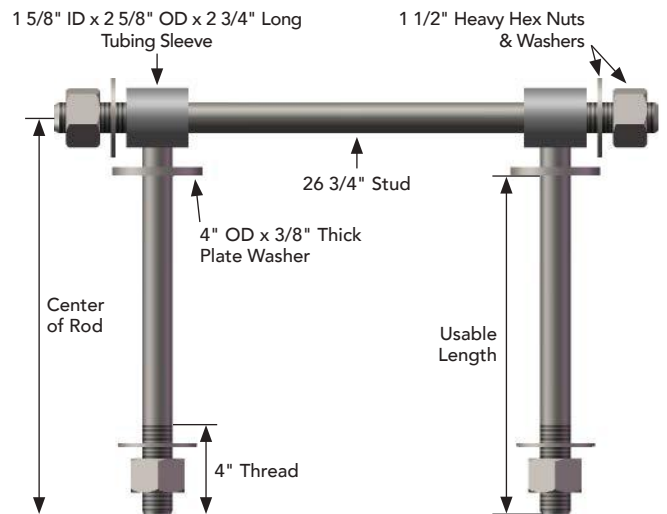

- Type A Couplers are unflanged
- Type B Couplers are flanged (washer welded below coupler head)
- Can be built to your specifications.
- Rod and couplers are hot dip galvanized in accordance with the requirements of ASTM F2329.
- Each assembly includes the following fasteners: (4) Hex Nuts, ASTM A563 and (4) Washers, both hot dip galvanized in accordance with the requirements of ASTM F2329.
- Made of import and domestic material. Certifications are available upon request.

Extra Strong Tie Rods

Extra Strong Tie Rods are assemblies with fabricated heavy-duty angles, an interior connection plate, and ASTM F1554 grade 105 threaded studs that tie concrete pipe and box joints together.

- Extra thread for increased adjustment
- All parts are hot dip galvanized to ASTM F2329
- Includes hex nuts and washers for each set of threads
- Tie rods are designed for holding pipe or box sections together, not for pulling sections tight
- Also known as pipe ties and joint restraints
- MN DOT State Project No. FIG. 5-395.110(B)
- IL DOT Standard 542016, 542001-04, 542011, 542006-01

Part Number	Description
M102814-105	Extra Strong Tie 6" – 9" ASTM F1554 GR105

MNDOT Standard Plate #8337C.

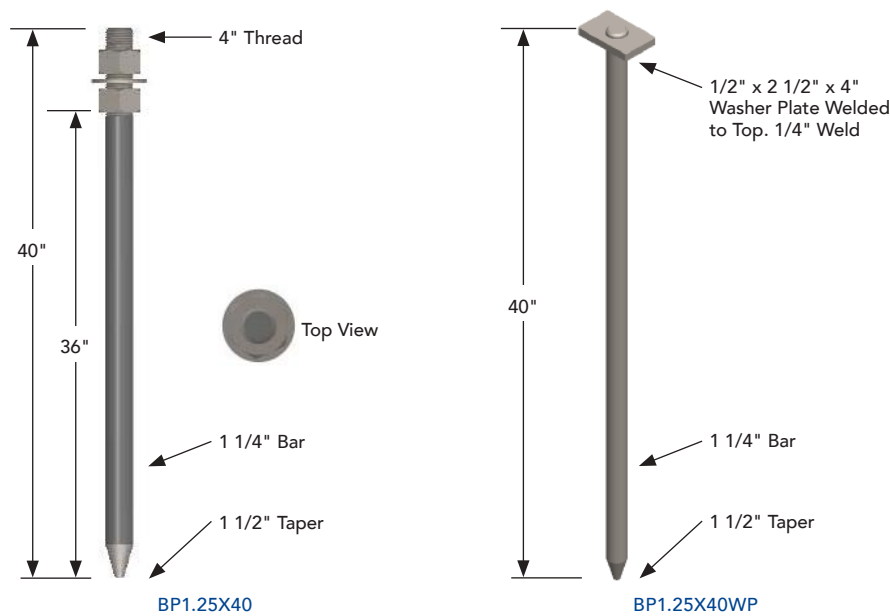

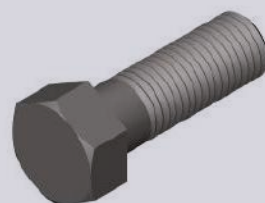

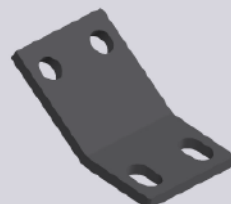

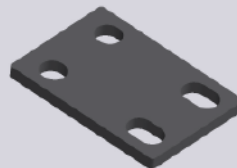

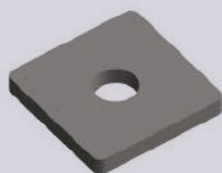

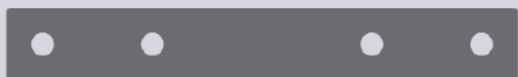

Anchor Pins

Anchor Pins are made to state standards or can be made to your specifications. All aspects of the pin can be customized including bar diameter and length, to the type of fasteners and threading or welding. Pins are available as plain or galvanized finish. See documents for more information about current pins.

- Please inquire for material certifications at the time of quote and the time of purchasing for connecting pins and anchor pins.
- Please call for a quote on specific designs, grades and fasteners.
