

## Alliance Service Partnership Programs

### Form Maintenance

Form Inspection of up to 10 forms, providing feedback on wear replacements and overall health of the included forms/molds.

#### General List of Equipment Evaluation:

- Hydraulic and Pneumatic Power Source
- Electrical System and Controls
- Power Transmission (wheels, belts, gears, bearings)
- Operator Console or Interface
- Actuators (cylinders, motors)
- Specialized Parts on Equipment

**NOTE:** Form evaluations require clean forms, staged for quick access, and exclusive use of a crane to manipulate forms to positions for inspections. This also includes form shop stands to allow for personnel to be close to the form and inside them, while the form is above the floor. With this arrangement, it is estimated 6 forms per day could be inspected.

## Service Agreement Plans

In the fast-paced precast concrete construction environment, unexpected equipment failures can bring operations to a grinding halt — causing costly downtime, missed deliveries and unnecessary stress. With an Afinitas Service Plan you can take control of your operation's reliability through plant optimization and preventative maintenance services, operator training, and form services.

Alliance Service Programs Choose the plan that works best for your operation:	Preventative Maintenance Plans		Plant Optimization
	Essential Plan 	Advantage Plan 	Premium Plan 
	Great option for standard plant evaluation, operator training, and plant maintenance services.	Includes all essential features plus plant benchmarking and our popular "Deep Dive" review, which lays out a more detailed analysis of plant efficiency and recommended improvements.	Includes all plant maintenance features, plus an Afinitas expert-driven focus on plant evaluation and efficiency.
